

A **master wrapper script** is a simple control panel for your phone's terminal.

Instead of remembering and typing multiple commands like `python log_builder.py`, `./sync_and_grep.sh`, or `rcclone sync`, you just run **one single file**. It opens a text-based menu on your screen where you type a number (1, 2, 3, or 4) to instantly launch whichever task you need.

Here is the exact code to create this master control panel directly on your phone.

Step 1: Create the Master Menu Script

Open your mobile terminal and run this exact block to build the script:

```
cat << 'EOF' > agent_panel.sh
#!/bin/bash

while true; do
    clear
    echo "=====
    echo "    📱 MOBILE AGENT WORKSPACE MANAGER    "
    echo "=====
    echo "1) 🔄 Sync Files From Google Drive"
    echo "2) 📝 Create New JSONL Log Entry"
    echo "3) 🔍 Grip/Grep Workspace Files"
    echo "4) 🚪 Exit"
    echo "=====
    read -p "Choose an option [1-4]: " choice

    case $choice in
        1)
            echo ""
            echo "🔄 Pulling latest .md, .jsonl, and skills.md
files..."
            rclone sync gdrive:Your_GDrive_Folder_Name
~/AgentWorkspace
            read -p "Press Enter to continue..." temp
            ;;
        2)
            echo ""
            python log_builder.py
            read -p "Press Enter to continue..." temp
            ;;
        3)
            echo ""
```

```

        read -p "🔍 What keyword do you want to grip? " keyword
        echo "-----"
        grep -rn "$keyword" ~/AgentWorkspace/
        echo "-----"
        read -p "Press Enter to continue..." temp
        ;;
    4)
        echo "Goodbye!"
        exit 0
        ;;
    *)
        echo "Invalid option. Please pick 1-4."
        sleep 2
        ;;
esac
done
EOF

chmod +x agent_panel.sh

```

Step 2: How to Run It on Your Phone

Anytime you open your mobile terminal app, you now just type this single command:

```
./agent_panel.sh
```

What Happens Next

Your screen will turn into a clean, simple menu.

- Pressing **1** completely automates downloading your updated Google Drive documents.
- Pressing **2** jumps straight into your text prompts to log field notes.
- Pressing **3** runs your search engine across your entire folder layout using the rules defined in your skills.md.

Do you want to add an option to this menu that **pushes your newly created logs back up to Google Drive**, or are you ready to test out the menu as it is?
