

Andronix officially came out in **2019**. [1]

The concept was created by co-founders Prakhar Shukla and Anurag Verma, who wanted to build a modern, user-friendly alternative to the outdated and visually unappealing Linux-on-Android installers available at the time. Since its initial 2019 rollout, the app has evolved through several iterations—including a complete rewrite in the Kotlin programming language in 2020—and has surpassed over 1 million downloads on the Google Play Store. [1, 2, 3]

If you are getting ready to build your workspace on the **Galaxy Tab S9 FE**, let me know:

-
- Do you want the step-by-step commands to **install Ubuntu via Andronix**?
- Would you like guidance on configuring the graphical user interface (**VNC Viewer**) to see your desktop?
