

Sovereign 3-Node Physical Hardware Topology & Workstation Breakdown

Mined from: `PLUGINS TOOLS AND MEMORY LAYER ARGUMENTS` (Files 3, 4, and 'Now that was.txt')

1. Physical Node Division of Labor

| - Housekeeper Task |

| - Red Auditor Gate |

| - Zero-Trust Audit |

|_____|

2. Dedicated Node Roles

- **Node Alpha (Mobile Engine):**
 - **Hardware:** Motorola RAZR Ultra 2025 (Snapdragon 8 Elite).
 - **Role:** Primary daily driver and user interface. Runs the decoupled 3-APK suite (`horizons-ui`, `aesc`, `aeyre`), local Qwen 3.5 0.8B/9B weights, Silero VAD voice ingress, and local ADB loopback.
- **Node Beta (Compute Server):**
 - **Hardware:** NVIDIA Jetson Orin Nano Super (8GB).
 - **Role:** Central database hub. Hosts PostgreSQL master persistence, OB1 vector protocol, and heavy background reasoning models.
- **Node Gamma (Autonomous Housekeeper & Red Gatekeeper):**
 - **Hardware:** DragonWing Rubik Pi 3.
 - **Role:** Dedicated sandboxed housekeeper running automated repository linting, git symlink verification, and the sealed Red Auditor daemon (`run_audit.sh`).
