# GCP Asymmetric Cross-Account IAM Bridge & Storage Sync Script
# Derived from: 4-ARCHITECTURE-cont.-(6-files) & Part 5 IAM Specifications
#
# Purpose:
#   Synchronizes data from a business/source GCS bucket to a personal developer
#   credit environment for Vertex AI Agent Builder indexing, enforcing
#   read-only permissions (roles/storage.objectViewer) so that personal projects
#   can never corrupt or alter source repositories.
#
