

README — aesop-xi/

Universal Orchestration Layer & Ethical Safety Protocols

W5+H Subsystem Identity

- **WHO:** Governed by the Chief Ethical Orchestration Agent; enforces boundaries across all worker swarms.
 - **WHAT:** Policies, permission boundaries, resource arbitration engines, and the sealed Red Auditor sandbox.
 - **WHEN:** Invoked prior to every mutating tool execution, repo update, or hardware allocation request.
 - **WHERE:** `novae-xorpus/aesop-xi/` (Federated Subsystem Root).
 - **WHY:** Prevents runaway recursive model loops, unauthorized filesystem mutations, context poisoning, and hardware thermal throttling.
 - **HOW:** Evaluates JSON/YAML guardrails, checks FastRPC/NPU hardware headroom, and enforces the `.incognito_red_sandbox/` gate.
-

Internal Directory Topology

```
|— README.md                # This document (Subsystem architecture & rules)
|
|— manifest.jsonl           # Local cryptographic catalog of policies & engines
|
|— arbitration/             # Resource & priority steering
|   |— arbitration_engine.py # Inter-agent priority arbitrator
|   |— hardware_throttler.py # Monitors Hexagon NPU thermal & RAM thresholds
|
|— policies/                # Hard operational boundaries & constraints
|   |— tool_usage_guardrails.json # Explicit limits on code modification tools
```

```
| |— security_clearance.yaml      # Multi-tenant and agent access boundaries
| |— zero_trust_rules.md         # Strict sensory immutability directives
|
|— .incognito_red_sandbox/       # [SHADOW ISOLATION] Sealed Red Gatekeeper
    |— manifest.jsonl           # Isolated quarantine index
    |— sandbox_evaluator.py      # Adversarial compliance & hallucination checker
    |— quarantine_logs/         # Rejected run traces (-1.0)
```

Beginner-Proof Implementation Rules

1. **Zero Direct Execution:** No worker agent may execute shell or file-writing tools without `arbitration_engine.py` approving the clearance token.
2. **Shadow Validation:** The `.incognito_red_sandbox/` is completely unlisted in public manifests; all worker agents hand off solely to the official Enterprise Cross-Auditor.
