

03_FILE_MANAGEMENT_AND_SCRIPTS_CANON .md

Mobile File Management, Rclone Sync Automation & JSONL Marker Architecture

1. Executive Summary & Provenance

This canonical specification synthesizes and standardizes the technical assets contained within the 16 file-management and scripting source documents ([3-FILES-MGMT16-SCRIPTS-\(16-files\)](#)).

It details:

1. Automated headless mobile synchronization between Google Drive and local device storage ([~/AgentWorkspace](#) / [~/novae-xorpus](#)) via [rclone](#).
 2. Terminal UI control loops ([agent_panel.sh](#)) and fast text search ([sync_and_grep.sh](#)).
 3. The Universal JSONL labeling engine for structured telemetry, prompt variables, and context tracking.
 4. Git synchronization hooks linking local consumers to [#d.u.m.b.a.s.s..](#)
-

2. The Mobile Sync Pipeline (rclone & Termux)

Remote Configuration Protocol

To pull cloud documents into the local agent workspace without interactive browser popups, [rclone](#) operates on Termux using pre-authenticated OAuth tokens:

- **Remote Target:** [gdrive:AgentWorkspace](#)
- **Local Target:** [~/AgentWorkspace](#)
- **Execution Command:**

```
rclone sync gdrive:Your_GDrive_Folder_Name ~/AgentWorkspace --fast-list --transfers 4
```

Local Grep Acceleration

Once synchronized, agents execute localized grep searches across Markdown SOPs and JSONL logs, eliminating network latency during real-time reasoning passes.

3. Universal JSONL Labeling & Marker Engine

Each ingested document receives a structured JSONL marker to power RAG and exact-match filtering:

```

  },  
  
  "retrieval_tokens": ["rclone", "grep", "sync", "termux", "jsonl", "manifest"]  
  
}
```

4. Cross-Repo Sync Hook (#d.u.m.b.a.s.s. Binding)

Consumer repositories (such as `aesop-xi` and `novus-aexenti`) maintain synchronization with the Master Vault through automated Git post-commit hooks:

1. Creates symlinks from consumer `RESUME.md` and `CLAUDE.md` into `~/novae-xorpus/projects/<consumer>/`.
2. Triggers `regenerate_masters.sh` to compile unified master logs across the enterprise stack.
