

RESUME.md — novaecopia Runtime State & Recovery Checkpoint

Session Context & Active Architecture State

- **Current Operational Node:** Node Alpha (Motorola Razr Ultra 2025 / Snapdragon 8 Elite)
- **Subsystem Target:** novaexopia/ (Tool Harnesses, 3-APK Decoupled Topology, MCP Bridges)
- **Last Sync Timestamp:** 2026-09-06T19:07:00-07:00

1. Active Daemon & Socket Ledger

Daemon / Service	Target Endpoint / Socket	Active Status	Process Role
WirelessAdbBridgeService	127.0.0.1:5555 (TCP)	PAIRED / RUNNING	Elevated Android shell execution with UID 2000
Ktor WebSocket Bridge	ws://127.0.0.1:8080/shell	LISTENING	Terminal streaming to Horizons UI Chromium viewport
npu_manager.py	/dev/socket/npu_manager.sock	ACTIVE (GenieX Backend)	Model swapping between Qwen 3.5 9B and Gemma 4 QAT
voice_stream_demon.py	/dev/socket/aeyle_media.sock	INITIALIZED (Silero VAD)	Ambient voice ingress and Kokoro-82M TTS synthesis
OpenWiki TUI File Admin	stdio / TUI	STAGED	Low-overhead codebase sanitization & manifest compilation

2. MCP Server Connectivity

- **Filesystem MCP:** Configured in `mcp_connectors/filesystem_mcp.json`. Sandboxed to `~/novae-xorpus`.
 - **SQLite MCP:** Deployed in `mcp_connectors/sqlite_mcp.py`. Ready for local `#d.u.m.b.a.s.s.` tables and `audit_ledger.db`.
 - **PostgreSQL MCP:** Configured in `mcp_connectors/postgres_mcp.json`. Direct route to Node Beta (Jetson Orin Nano Super) via Tailscale IP `100.64.0.2:5432`.
-

3. Fast Recovery & Bootstrap Commands

If the device reboots or process state drops:

1. Verify ADB Loopback connection

```
adb connect 127.0.0.1:5555
```

2. Spawn NPU manager socket daemon in background

```
python3 novaexopia/aesc/npu_manager.py &
```

3. Launch Æyre voice stream daemon

```
python3 novaexopia/aeyre/voice_stream_daemon.py &
```

4. Open ÆEsc Agent Panel

```
bash novaexopia/aesc/agent_panel.sh
```
