

UNRESOLVED.md — Backlog, Pending Enhancements & Tickets

Subsystem: `skills-and-capabilities`

Active Backlog & Future Enhancements

[TICKET-SKILLS-01] TypeScript AST Full Parser Integration

- **Subsystem:** `code-review-graph/`
- **Issue:** `graph_builder.py` currently uses regex heuristics for JavaScript and TypeScript imports and functions. While fast and zero-dependency, complex TypeScript type declarations and dynamic re-exports can be missed.
- **Proposal:** Add an optional Node.js bridge to `@babel/parser` or `typescript` when Node.js runtime is detected, falling back to Python regex on edge runtimes.
- **Status:** PENDING

[TICKET-SKILLS-02] Live NotebookLM API Remote Connector

- **Subsystem:** `notebook-lmpy/`
- **Issue:** `query_notebook.py` currently executes against local curated markdown sources. A remote bridge to Google Workspace Gemini Notebook API endpoints can be configured for live multi-document querying when network is enabled.
- **Status:** PENDING

[TICKET-SKILLS-03] Obsidian Canvas JSON Export

- **Subsystem:** `obsidian-skills/`
- **Issue:** `graph_sync.py` outputs standard JSON adjacency lists and Markdown tables. Support for native Obsidian Canvas (`.canvas`) JSON layouts would allow visual node drag-and-drop on desktop.
- **Status:** PENDING

[TICKET-SKILLS-04] Pre-Trend Scraper Daemon Automation

- **Subsystem:** `early-trend-scraper/`
- **Issue:** Implement background scheduled crontab hooks for `daily_scraper.py` and tie its output telemetry directly into `trending_databank.jsonl`.
- **Status:** PENDING
