

```
---
name: claude-code-skill-scaffolding
description: Standardized procedure for scaffolding, structuring, and registering custom Claude
Code / Gemini skills into .claude/skills/ or repository skill planes.
---
```

Instructions

1. Skill Directory Resolution

- Check if `.claude/skills/` exists in the current repo root.
- If absent, create it: `mkdir -p .claude/skills/`.

2. YAML Frontmatter Requirements

Every skill file MUST begin with strict YAML frontmatter:

```
```yaml
```

```

name: <kebab-case-name>
description: <concise summary of functionality and triggers>

```

### ## 3. Slash Command Registration

- When saved as `.claude/skills/<name>.md`, Claude Code automatically maps it to `!<name>`.
- The markdown body defines the step-by-step reasoning steps, tool usage constraints, and output contract.
