
name: concierge-compiler description: "Transforms unstructured voice transcripts and multi-paragraph stream-of-consciousness user prompts into clean, structured Markdown meta-prompts ready for execution."

Concierge Meta-Prompt Compiler Skill

Use this skill when processing voice ingress, speech-to-text transcripts, or raw phone inputs to prepare a clean prompt for execution models without conversational boilerplate.

Operating Principles

1. **Strip Transcription Artifacts:**
 - Remove repetitions, false starts, and filler phrases ("um", "you know", "basically", "or whatever").
 - Fix speech recognition typos and run-on sentences.
2. **Isolate Concrete Intent:**
 - Clearly state the user's primary goal in 1–2 crisp sentences.
 - Separate contextual background from actionable imperatives.
3. **Explicitly Inject Invariants:**
 - Enforce system rules (e.g., non-destructive operations, exact naming conventions, required directory targets).
4. **Define Structured Output:**
 - Request bounded, verifiable deliverables (e.g., specific file types, tables, exit codes).
