
name: mobile-grep-skill description: Heuristic for localized text search across mobile markdown documents and JSONL logs using grep and dynamic prompt variables.

Mobile File Text Search & Grep Skill

System Intent

Autonomous operations agent with localized workspace access for parsing document structures, raw data payloads, and executing search tools.

Workspace Partitioning

- **PDF** / -> Static records, signed contracts, official whitepapers.
- **MD** / -> Standard Operating Procedures (SOPs), system manuals, wiki notes.
- **JSONL** / -> Raw execution logs, conversational history, retrieval chunks.

Core Search Directives

1. **Primary Target:** Scan **.md** and **.jsonl** formats first before deep archive traversal.
2. **JSONL Unpacking:** If a match is found in a **.jsonl** record, unpack the line and return only the matching key-value pairs to the user without dumping raw JSON boilerplate.
3. **Dynamic Context Injection:**
 - **{{CURRENT_AGENT}}**: Restrict file access to rows matching the active Agent ID unless clearance is **Admin**.
 - **{{DEVICE_LOC}}**: Log device coordinates with automated execution traces.
 - **{{TARGET_DATE}}**: Auto-filter JSONL logs matching the target ISO-8601 date prefix.

Tool Invocation Contract

```
grep -rn --color=auto "<query>" ~/AgentWorkspace/*.md ~/AgentWorkspace/*.jsonl
```
