

# MASTER SCRIPTS REGISTRY — NovÆxorpus Ecosystem

**Authority:** Central registry for all executable scripts, daemons, utilities, and runner tools across all 8 repositories in the NovÆxorpus living canon.

---

## 1. Dispersal Architecture & Locality of Reference

Per the Locality of Reference Invariant:

- Scripts execute within their respective repository context.
  - This directory ([novae-xorpus/scripts/](#)) maintains the master inventory, execution signatures, and cross-repo orchestration scripts.
- 

## 2. Master Scripts Catalog

| Script Name                               | Target Repository                   | Subsystem / Function                  | Runtime  | Execution Trigger / Port                |
|-------------------------------------------|-------------------------------------|---------------------------------------|----------|-----------------------------------------|
| <a href="#">system_house_keeper.sh</a>    | <a href="#">novae-xorpus/tools/</a> | Zero-trust hygiene sweeper            | Bash     | Periodic / Scheduled                    |
| <a href="#">compile_manifest.py</a>       | <a href="#">novae-xorpus/tools/</a> | Manifest SHA-256 hasher & cataloger   | Python 3 | Post-commit / On-change                 |
| <a href="#">generate_jsonl_markers.py</a> | <a href="#">novae-xorpus/tools/</a> | Pre-tokenized chunk marker generator  | Python 3 | Post-normalization                      |
| <a href="#">run_audit.sh</a>              | <a href="#">aesop-xi/</a>           | Red Agent background isolation daemon | Bash     | External <a href="#">~/.red/</a> runner |

| Script Name                                             | Target Repository                | Subsystem / Function                        | Runtime  | Execution Trigger / Port |
|---------------------------------------------------------|----------------------------------|---------------------------------------------|----------|--------------------------|
| <code>npu_manager.py</code>                             | <code>novus-aesc/tools/</code>   | Hexagon NPU socket model switcher           | Python 3 | UNIX socket              |
| <code>talk.sh / listen.sh</code>                        | <code>novus-ayre/scripts/</code> | Sherpa-ONNX / Moonshine / Kokoro audio      | Bash     | Sensory ingress pipeline |
| <code>bootstrap-stack.sh</code>                         | <code>aesop-xi/scripts/</code>   | Multi-node dev environment bootstrap        | Bash     | Session start            |
| <code>check.py</code><br>( <code>corpus-verify</code> ) | <code>novae-xorpus/tools/</code> | Hard Rule 5 disjoint extractor verification | Python 3 | Phase 2 RLVR validation  |
