

MAP.md — Novaexopia Component & Navigation Map

Subsystem Identity

- **Repository:** `novaexopia`
- **Role:** Tool harness runtime, OpenWiki TUI harness, modular swarm harnesses, and MCP capability bridge.
- **Reference Spec:**
[PROPOSAL-V2-CORRECTED-WIKI-TERMINOLOGY-AND-s-tier-ALTERNATIVE.md](https://drive.google.com/file/d/1S2cQzDPTknjzX9fR3q6lqsRLZxkcQAcA/view)
- **Federated Architecture:**
[05_FEDERATED_FILE_TREE_TOPOLOGY_MASTER.md](https://docs.google.com/document/d/1mhJbcx30IBFOu_WjbcHb0dIHFBzaN7p03Vzk2W017Rw/edit)
- **Pointers & Checkouts:** [The Federated Repositories & Pointer Checkouts](https://docs.google.com/document/d/1Nb-QEhUXMSdwcQ9-3Q4AQihMmw6jxj5l_4wRL2jhQUE/edit)

Directory Ontology

Baseline Control Files

- `MAP.md`: This file — Human and agent navigation map.
- `manifest.jsonl`: Cryptographic index and machine RAG catalog.
- `README.md`: Subsystem scope, operational invariants, and runbooks.
- `AGENTS.md`: Agent execution contracts, boundaries, and hard rules.
- `RESUME.md`: Verified state of progress and session handoff ledger.
- `chunk.jsonl`: Pre-tokenized machine retrieval passage chunks.

Universal Subdirectories

- `raw/`: Unprocessed intake landing zone.
- `clean\_md/`: Normalized, high-density condensed markdown (100% build context preserved).
- `wiki\_md/`: Compounding living wiki knowledge nodes with [[wikilinks]].
- `skills/`: Local procedural skills and prompts.
- `tools/`: Local executable scripts and CLI utilities.
- `scripts/`: Production shell and Python execution scripts.
- `hooks/`: Subsystem lifecycle, git, and audit hooks.
- `pending/`: Staged tasks, tickets, and unverified outputs.
- `audit/`: Test traces, failure logs, and hygiene verification reports.
- `archive/`: Deprecated drafts and historical snapshots.

Domain Subdirectories

- `openwiki-tui-harness/`: OpenWiki TUI terminal frontend, interactive views, and text dashboard.
- `modular\_harnesses/`: 8 modular swarm harnesses (`ecc-edge-compute/`, `prime-agent/`,

`ringer-notif-loop/`, `hermes-soul/`, `aider-workspace/`, `local-nanobots/`, `smol-agents/`,
`turbo-quant-swarms/`).

- `mcp\_connectors/`: Model Context Protocol capability adapters, tool bridges, and server
configs.
