1. Subsystem Scope & Architectural Responsibilities

- ****Role:**** Native Android system terminal and background daemon service.
- ****Process Management:**** Runs as a `ForegroundService` with `START_STICKY` and `FOREGROUND_APP_ADJ` to bypass Android Low Memory Killer (LMK).
- ****Elevated Execution:**** Operates ADB loopback connection on `127.0.0.1:5555` executing as UID 2000 (`shell`).
- ****Hardware Interfacing:**** Houses `npu_manager.py` over UNIX domain sockets for dynamic model switching and execution control.
