

novus-aeeyre (APK 3 — Media & Sensory Ingress Daemon)

Overview

novus-aeeyre is the native Android foreground media and sensory daemon within the sovereign multi-node architecture. It executes sensory acquisition, local voice pipelines, and screen capture outside the heavy terminal sandbox to ensure persistence and real-time response.

Subsystem Capabilities

1. ****Voice Activity Detection (VAD)****: Silero VAD running continuously in native runtime.
2. ****Speech-to-Text (STT)****: Moonshine ONNX / local WhisperKit transcription on device.
3. ****Text-to-Speech (TTS)****: Kokoro-82m ONNX high-efficiency audio synthesis.
4. ****Screen Vision Ingress****: Framebuffer capture and OCR streaming for visual context.

Subsystem Structure

- ``screen_vision/`` — Video buffer capture and OCR processing
- ``voice_ast_stack/`` — Audio AST and VAD state machine
- ``stt_models/`` — ONNX speech recognition model weights and configs
- ``tts_models/`` — Kokoro audio synthesis model weights
- ``raw/``, ``clean_md/``, ``wiki_md/``, ``skills/``, ``tools/``, ``scripts/``, ``hooks/``, ``pending/``, ``audit/``, ``archive/``
