

That screenshot shows the exact problem: mobile Markdown renderers clip tables horizontally, cutting off the third column completely and squishing inline paths like 02_wiki_md/ into broken snippets like 0:.

To fix this completely:

1. **Zero Markdown tables:** The verification guide is converted into a clean, mobile-proof card list that cannot be clipped.
2. **Dedicated Copy Blocks:** Every section is wrapped in its own code block so you get the one-tap **"Copy"** button for each piece.
3. **Strict 40-character line limit:** Nothing will wrap or break when pasted into Google Docs.

Block 1: Visual Architecture Tree

```

|—  rlvr_verifiers/
|—  hygiene_reports/
```

Block 2: Tier Architecture Cards

```
=====
TIER BREAKDOWN & OPERATIONAL CARDS
=====
```

[ ROOT: METACOGNITIVE INDEX]

- Path: / (vault_root)
- Files: MAP.md & manifest.jsonl
- Operator: Planning Agent
- Role: Global routing & hashes

[ TIER 1: COLD SENSORY ARCHIVE]

- Path: 01_raw_sources/
- Folders: pdf/, media/, text/
- Operator: Ingestion Pipeline
- Role: Unaltered ground truth
- Invariant: Strictly Read-Only

[ TIER 2: THE LLM WIKI LAYER]

- Path: 02_wiki_md/
- Folders: concepts/, architectures/
entities/, indexes/
- Operator: Files Executive Agent
(via OpenWiki TUI)
- Role: Linked Markdown graph

[ TIER 3: RECALL CACHE]

- Path: 03_recall_cache/
- Folders: jsonl/, vectors/, kv_store/
- Operator: Indexing Workers
- Role: Tokenized machine buffer
- Invariant: Ephemeral & Rebuildable

[ TIER 4: PROCEDURAL RUNTIME]

- Path: 04_skills_runtime/
- Folders: prompt_skills/, runtimes/
extracted_tools/, policies/
- Operator: Compilation Engine
- Role: SKILL.md & CLI .sh/.py tools

[ TIER 5: EPISODIC STORE & AUDIT]

- Path: 05_episodic_logs/

- Folders: daily_driver_sync/,
 trajectories/, rlvr_verifiers/
 red_audit_sandbox/
- Operator: Cross-Auditor & Red Auditor
- Role: Tri-model logs & RLVR
- Invariant: Append-Only telemetry

Block 3: Daytime Ingestion & Context Flow

Block 4: Nighttime Audit & RLVR Flow

Block 5: Verification Checklist (No-Table Format)

=====
HUMAN OPERATOR VERIFICATION CHECKLIST
=====

[CHECK 1: DISTRIBUTED MANIFESTS]

- Inspection: Root + all 5 tier folders
- Expected: Active, non-empty
manifest.jsonl in each tier

[CHECK 2: LLM WIKI GRAPH]

- Inspection: 02_wiki_md/ via OpenWiki
- Expected: Zero broken [[wikilinks]]
Frontmatter sources intact

[CHECK 3: DUAL EXTRACTION]

- Inspection: 04_skills_runtime/
- Expected: New documentation yields
both tools (.sh/.py) and
skills (SKILL.md)

[CHECK 4: P2P SESSION SYNC]

- Inspection: 05_episodic_logs/sync/
- Expected: Daily logs present with
Query, Executor, and
Frontier model trace tags

[CHECK 5: RED AUDITOR GATEKEEPER]

- Inspection: 05_episodic_logs/red/
- Expected: Only VERDICT_APPROVED
scripts reach cloud upload

[CHECK 6: CLOUD RLVR VERIFIERS]

- Inspection: 05_episodic_logs/rlvr/
- Expected: Explicit +1.0 (pass) or
-1.0 (fail with trace)
recorded for each test
