

AGENTS.md — Operational Contracts & Agent Invariants

Repository: raw_database

1. Ingestion Rules & Non-1:1 Condensation Law

- Raw input documents must never be modified in-place; original sources in `02\_MY\_ORIGINALS/` and `raw/` remain immutable.
- Conversational filler, redundant logs, and formatting chrome must be stripped when generating `clean\_md/`.
- 100% build fidelity must be preserved: code, parameters, environment variables, and functional schemas must not be lost or hallucinated.

2. Extractor Independence (Hard Rule 5)

- Ingestion verification must be performed using disjoint extractors (e.g., checking with pypdf what was cleaned with pymupdf).
- Outputs must pass independent RLVR verification before being committed into the Living Wiki.

3. Red Auditor Stealth Invariant

- The Red Auditor lives strictly in isolated `~/.red/` outside all visible repository manifests and directory trees.
- Only `red\_verdict: pass|fail|n/a` may be surfaced in audit logs.
