

README.md — raw_database Repository

1. Scope and Identity

`raw\_database` is the immutable sensory buffer and intake repository for Project Novæxorpus. It serves as the landing zone where raw documents, external web scrapes, technical manuals, and audio/visual captures are staged prior to condensation and extraction.

2. Universal File Configuration (16-Item Baseline)

This repository strictly enforces the canonical 16-item baseline:

- 6 Control & Manifest Files: `MAP.md`, `manifest.jsonl`, `README.md`, `AGENTS.md`, `RESUME.md`, `chunk.jsonl`
- 10 Universal Subfolders: `raw/`, `clean\_md/`, `wiki\_md/`, `skills/`, `tools/`, `scripts/`, `hooks/`, `pending/`, `audit/`, `archive/`
- Domain Extensions: `spark\_recommendations/`, `02\_MY\_ORIGINALS/`

3. Operational Directives & Pointers

- **Non-1:1 Condensation Law:** Strip conversational padding while preserving 100% of technical rules, parameters, and build fidelity.
- **Locality of Reference:** Tools and skills live directly inside this repository where they are applied.
- **Master References:** Governed by `A\_OPERATOR\_MAP.md` and `Universal file configuration` in the master MAPS library.
