

Canonical 8-Repository Mirror Specification

****Scope****: Master directory topology and ingestion contracts across the exact 8 canonical repositories.

****Archive Download Link****:

[Canonical_8_Repo_Mirror.zip](https://drive.google.com/file/d/1CR5o48SMvOLrjADBY6CisZoEjZrj0JSU/view?usp=drivesdk)

1. The 8 Canonical Repositories

1. ****`aesop-xi`**** (**`Æsop-Xi`**): Universal orchestration layer, ethical policy governance & arbitration.
2. ****`novae-xorpus`**** (**`NovÆxorpus`**): Hardened universal database, Living Wiki vault & ground truth repository.
3. ****`novus-aexenti`**** (**`NovusÆxenti`**): Cognitive MoE reasoning engine (0.8B Triage vs. 9B Executor) & memory flywheel.
4. ****`novaexopia`**** (**`Novaexopia`**): Tool harness runtime, OpenWiki TUI, and MCP capability bridge.
5. ****`raw\_database`**** (**`Raw database`**): Cold sensory ground truth, raw data ingestion & interceptor extraction zone.
6. ****`horizons-ui`**** (**`Horizons-Ui`**): Master visual presentation shell, Android Chromium WebView & concierge UI.
7. ****`novus-aesc`**** (**`Æsc`**): Native system terminal & shell daemon (ADB loopback on 127.0.0.1:5555).
8. ****`novus-aeyre`**** (**`novus-aeyre`**): Native media & sensory ingress daemon (Silero VAD, Moonshine STT, Kokoro TTS).

2. Universal Subsystem Directory Layout

Every single repository contains this exact layout:

...

```
<repo_name>/
├── MAP.md           # Human-readable navigation map & component ontology
├── manifest.jsonl   # Cryptographic file index & catalog
├── README.md        # Subsystem identity, scope & operational setup
├── AGENTS.md        # Operational boundaries & agent contracts
├── RESUME.md        # Verified progress checkpoints & session state
└── chunk.jsonl      # Pre-tokenized machine retrieval & RAG passage layer
```

```

|
|— raw/          # Incoming source landing zone (Interceptor extracts here)
|— clean_md/     # High-density condensed markdown (100% build context preserved)
|— wiki_md/      # Compounding living LLM wiki nodes with wikilinks
|— skills/       # Local procedural skills developed and applied here
|— tools/        # Local executable scripts & CLI utilities
|— pending/      # Staged tickets, backlog tasks, and unverified outputs
|— audit/        # Structured logs, failure traces, and divergence reports
...

```

Crucial Invariant: The Red Auditor agent operates strictly inside an isolated external sandbox and does not appear in any repository trees.

3. Worker Agent / Subagent Ingestion Law

- ****No 1:1 file parity****: Strip conversational fluff and redundant boilerplate, but preserve 100% of technical instructions, parameters, and build fidelity so that raw and clean markdown build the exact same output.
- ****Locality of Reference****: Skills and tools live locally inside the repository where they are applied.
- ****Cryptographic Grounding****: All assets are indexed in the repository's `manifest.jsonl`.
