

AUDIT-05-HORIZONS-UI.md

Audit & Extraction Report: Subfolder 5 of ___Lex-Novi-Æxentis-Copiæ (--•🌅HORIZONS_UI_🌐)

Scope: Master frontend presentation shell (APK 1), Four Rooms & Seven-Tile architecture, and WebSocket client bridges.

Parent Source: ___Lex-Novi-Æxentis-Copiæ/--•🌅HORIZONS_UI_🌐
(19Ifku0MOGRiuLANHEg3fU9gjhMu5sbQs).

Status: All original files preserved 100% untouched.

1. Purpose & System Role: The Presentation Concierge (APK 1)

Horizons UI is the primary visual interface and concierge shell for the entire ecosystem.

The Decoupled Invariant:

- Horizons UI contains **zero heavy inference runtimes or bash command executors** inside its own process.
- It operates as an Android Chromium WebView hosting an HTML5/React workspace.
- It connects via local WebSockets to the background daemons:
 - `ws://127.0.0.1:8080/shell` → Connects to **Æsc APK** for terminal I/O.
 - `ws://127.0.0.1:8765` → Connects to **Æyre APK** for real-time speech and VAD audio events.

2. The Four Rooms & Seven-Tile Modular Architecture

Extracted directly from 4. `Surface level spec: The Four Rooms & Seven-Tile Modular Architecture:`

1. The Four Rooms (Contextual Viewports):	
• The Room of Thought → Model reasoning, planning, and prompts	
• The Room of Action → Terminal execution, bash runs, tool I/O	
• The Room of Observation → Screen vision, sensory feeds, and logs	
• The Room of Knowledge → Obsidian living wiki & graph navigator	
2. The Seven Functional Tiles:	
[1. Chat Interface] [2. Terminal Stream] [3. Model Picker]	
[4. File Browser / RAG] [5. Voice / VAD Canvas] [6. Hardware NPU]	
[7. AST Code Graph View]	

3. Subfolder Breakdown & Audit

-  **(*8-5) What_it_IS_/What_it_DOES-Horizons _Ui:**
 - Houses the core architectural specifications: *The Four Rooms & Seven-Tile Modular Architecture*, *The Horizons Workbench*, and *Horizons App: Comprehensive Architectural Blueprint*.
 - Action:* Codified into `novaexopia/horizons-ui/` in `01_SOVEREIGN_NODE_AND_APK_TOPOLOGY.md`.
-  **Th.GOLDEN-TICKET🎟️:**
 - Contains *QNN/QAIRT-System Design: half Gemini slop/ half useful info*.
 - Extraction:* Mined the FastRPC JNI bindings and buffer handover routines connecting the UI to the Qualcomm HTP kernel.
 - Action:* Enveloped into `README_VENDOR_CORPORA.md`.
-  **DesignXorpus & themes:**
 - Visual styling parameters, dark-mode CSS tokens, and accessibility contrast standards for mobile OLED and outdoor field monitors.

- *Action*: Preserved in `novaexopia/horizons-ui/app/src/main/assets/web/themes/`.
4. 📁 **build-jha & Reference archives**:
- Historical build scripts and discussion transcripts detailing early Android packaging issues.
 - *Action*: Retained untouched in place for historical provenance.
-

4. What Was Combined & What Was Trimmed

- **Fluff Trimmed**: Removed speculative discussions about Flutter vs. React Native (the decision is firmly locked on Chromium WebView + native Kotlin background services).
- **Combined Specifications**:
 - Synthesized the Four Rooms & Seven-Tile architecture directly with the `WirelessAdbBridgeService.kt` WebSocket specs, creating a unified frontend-to-daemon bridge.
