

RESUME.md — Project __NovÆxorpus(NÆX) & Lex-Novi-Æxentis-Copiæ

Session Timestamp: 2026-09-04T00:50:00-07:00

Current Phase: Phase 1 Stack Audit Complete (Projects 1, 2, 3 fully reviewed; 5 Master Specifications committed to Google Drive).

Next Immediate Target: Project 4 Review (4-UNIVERSAL_MEMORY_(16-files)).

1. Five Official Master Specifications Created & Available in Drive

1. [00_DEFINITIVE_MASTER_SPECIFICATION_V3.md](#)

- **Apex Authority:** Envelops `Definitive Master Specification.txt`, 1A, 1B, and `Response..`
- Establishes the 5+1 Cognitive Memory Topology (`01_raw_sources/` through `05_episodic_logs/`).
- Defines the **Cross-Auditor / Data Log Collector / Script Editor Agent** as the sole recognized enterprise auditor.
- Seals the **Red Auditor** into `.incognito_red_sandbox/` (hidden shadow gatekeeper).

2. [01_SOVEREIGN_NODE_AND_APK_TOPOLOGY.md](#)

- Envelops the 3-APK framework: **Horizons UI** (presentation shell) + **ÆEsc** (terminal/shell daemon replacing Termux) + **Æyre** (media/sensory daemon).
- Details the local **ADB loopback** on `127.0.0.1:5555` running with UID 2000 (`shell`) permissions without root.
- Outlines **DroidDesk** workstation mode salvaging Horizons repo to render Termux obsolete.
- Maps the 3-node physical mesh: Node Alpha (Moto RAZR Ultra 2025), Node Beta (Jetson Orin Nano Super), Node Gamma (Rubik Pi 3).

3. [02_DUMBASS_UNIVERSAL_MEMORY_SPEC.md](#)

- Unifies the **#d.u.m.b.a.s.s.** memory engine:
 - `mem0`: in-session episodic state & user habits on Node Alpha.
 - `0B1`: static ground-truth retrieval protocol ubiquitous across the entire network via MCP.

- **OmniRoute**: local AI gateway (`localhost:20128`) for token conservation, prompt cache hits, and provider routing.
- **Reasoning Bank**: epistemic state ledger (`active_execution_paths.json`) for multi-model recovery.
- **SQLite**: embedded on-device tables for sub-5ms lookups.
- **PostgreSQL**: authoritative relational persistence on Node Beta.
- **Continual Harness**: reset-free online adaptation maintaining immutable base prompts and rollback-safe `/refine` cycles.

4. [03_DUAL_OPERATIONAL_HARNESS_AND_MCP_SPEC.md](#)

- Defines the dual operational modes:
 - **Mode A (Developer Terminal)**: Claude Code CLI governed by ECC (`honey-crush`, `nexus-mapper`, `ecc-planner`, Pocock skills).
 - **Mode B (Sovereign Edge Assistant)**: On-device weights on Hexagon NPU governed by Prime Agent (Prime Intellect).
 - **Inter-Mode Bridge**: Prime Agent invokes Claude Code strictly as a discrete subprocess tool without nested harness wrapping.
- Details what Prime Agent runs on: Persistent Python REPL, OpenAI client pointing to OmniRoute (`localhost:20128`), and MCP tools.
- Outlines MCP server infrastructure and PyGraphify AST code review graphs.

5. [04_ON_DEVICE_INGESTION_AND_W5H_FRAMEWORK.md](#)

- Codifies the **W5+H System Matrix** (Who, What, When, Where, Why, How) across all agents, tools, and repos.
- Outlines the clean Markdown-first ingestion pipeline (`pymupdf`, `python-docx`, `markdownify`) eliminating PDF binary bloat.
- Includes ready-to-run scripts for `convert_raw_to_markdown.py`, `generate_jsonl_markers.py`, and OpenWiki CLI GLM synthesis.

2. Hard Architectural Rules & Settled Invariants

1. **Originals are 100% Intact**: No original files across `__Novæxorpux(NÆX)` or `___Lex-Novi-Æxentis-Copiæ` have been moved, renamed, or modified.
2. **Definitive Master Specification.txt is the Apex Authority**: It envelops 1A, 1B, and the 5+1 resolution response.
3. **ÆEsc & Æyre are the Decoupled APKs**: ÆEsc is the terminal/shell daemon; Æyre is the sensory/media daemon.
4. **OmniRoute is an Inference / Token Gateway**: Running on `localhost:20128` for token conservation, prompt caching, and cost routing (not a memory extraction layer).

5. **LocalAI is completely removed from the phone:** Replaced by lean native GenieX (Hexagon NPU) + Node.js + Python 3.
 6. **ECC vs. Prime Agent Boundary:** ECC governs Claude Code CLI; Prime Agent governs on-device edge weights. Prime Agent treats Claude Code as a discrete tool invocation.
 7. **Beginner-Proof Standard:** All code and architecture must be explained with reasoning, problem solved, and data flow so a junior developer can execute it from scratch.
-

3. Resume Trigger for Next Session

When starting a new session, paste this exact prompt:

Resume Project __NovÆxorpus(NÆX).

Review status:

- All core architectural invariants, the W5+H framework, and the 5 master specifications are codified and committed to Google Drive:

1. 00_DEFINITIVE_MASTER_SPECIFICATION_V3.md
2. 01_SOVEREIGN_NODE_AND_APK_TOPOLOGY.md
3. 02_DUMBASS_UNIVERSAL_MEMORY_SPEC.md
4. 03_DUAL_OPERATIONAL_HARNESS_AND_MCP_SPEC.md
5. 04_ON_DEVICE_INGESTION_AND_W5H_FRAMEWORK.md

- Projects 1, 2, and 3 from __NovÆxorpus(NÆX) are fully audited.

- Immediate action: Begin file-by-file audit of Project 4: 4-UNIVERSAL_MEMORY_(16-files).
