

Claude saves skills as folders containing a main file named SKILL.md. They are labeled using YAML frontmatter metadata at the top of the file and plain Markdown for instructions. [1, 2, 3]

Storage Locations and Saving

- **Personal storage:** Saved locally in ~/.claude/skills/ for use across all your projects.
- **Project storage:** Saved in .claude/skills/ inside a specific repository.
- **Web/Desktop app:** Uploaded as a zipped folder via the capabilities settings menu. [2, 3, 4, 5]

Labeling and File Structure (SKILL.md)

- **YAML Frontmatter:** Placed between triple dashes (---) at the top of the file to define triggers and descriptions.
- **Directory name:** The name of the folder acts as the command name (e.g., typing /skill-name).
- **Markdown body:** Standard Markdown headings and text below the frontmatter contain the precise execution steps. [1, 3, 6]

If you want, let me know:

- Are you using **Claude Code** or the **Web App**?
- Do you want an example of a **custom skill file** written out?
